Facilities Hub: Project Documentation

1. Project summary

Company Facilities Hub lets employees browse company facilities, request access and report issues, while administrators manage facilities, approve requests and track usage and cost. It is built as a Power Platform solution.

Component	Name	Purpose
Data	5 Dataverse tables + 1 process table	Employees, facilities, usage, requests, issues
Model-driven app	CFH Admin Console	Admin back office for all tables
Canvas app	Facility Hub (phone)	Employee self-service
Business rules	6 table rules	Data validation and field behaviour
Business process flow	Request Lifecycle	4-stage request tracking
Cloud flows	Request Approval, Weekly Issue Digest, Usage Summary	Approvals and e-mail automation

2. Dataverse data model

Five custom tables hold the business data, plus one system table (Request Lifecycle) created by the business process flow. Employees, facilities and usage were loaded from the source CSV files; requests and issues are created by the apps.

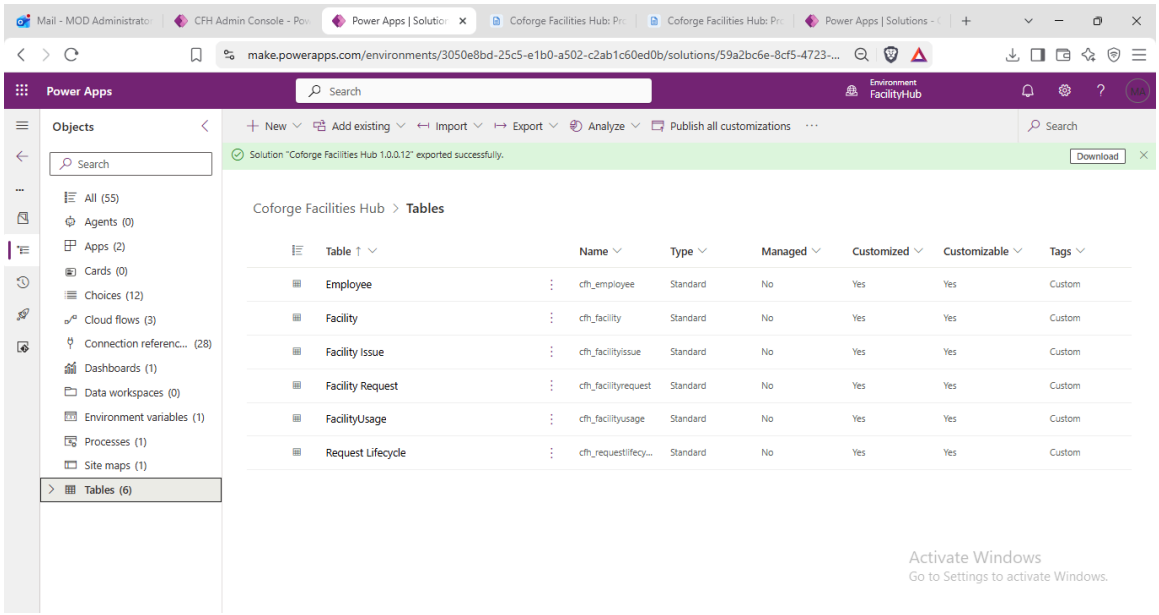

Table	Ownership	Key columns	Relationships
Employee (`cfh_employee`)	Organization	Employee Name (primary), Employee Code, Email, Department, Job Role, Employment Type, Employee Status, Joining Date, Office Location	Manager → Employee
Facility (`cfh_facility`)	Organization	Facility Name (primary), Facility Code, Category, Provider, Facility Status, Monthly Budget, Monthly Operating Cost, Annual Budget	Facility Owner → Employee
Facility Usage (`cfh_facilityusage`)	Organization	Usage ID (primary), Month, Usage Frequency, Cost Per Use, Usage Cost, Paid By, Review Flag	Employee, Facility

Table	Ownership	Key columns	Relationships
Facility Request (`cfh_facilityrequest`)	User	Request Number (autonumber), Request Type, Start Date, Reason, Status Reason, Rejection Reason, Fulfilled On	Employee, Approver → Employee, Facility
Facility Issue (`cfh_facilityissue`)	User	Issue Number (autonumber), Issue Category, Priority, Description, Status, Escalation Notes, Resolved On	Facility, Reported By → Employee, Assigned To → Employee

Calculated columns: Annual Budget = Monthly Budget × 12 (Facility); Usage Cost = Usage Frequency × Cost Per Use (Facility Usage).

Choices (global): Department, Office Location, Employment Type, Employee Status, Facility Category (Transport, Food & Beverage, Parking, Fitness, Medical, Recreation), Facility Status, Issue Category (Cleaning, Maintenance, Safety, Billing, Other, Food Quality), Priority (Low–Critical), Request Type (Renewal, Cancellation, New Access), Paid By (Company, Employee).

Environment variable: `cfh_AdminEmail` holds the administrator address used by the e-mail flows.

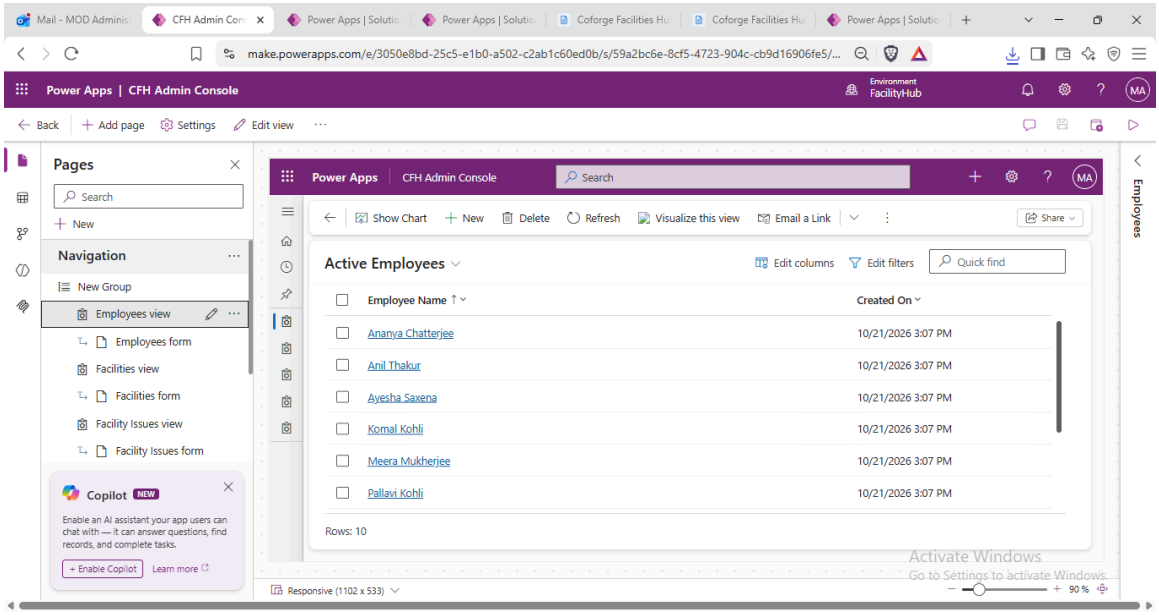

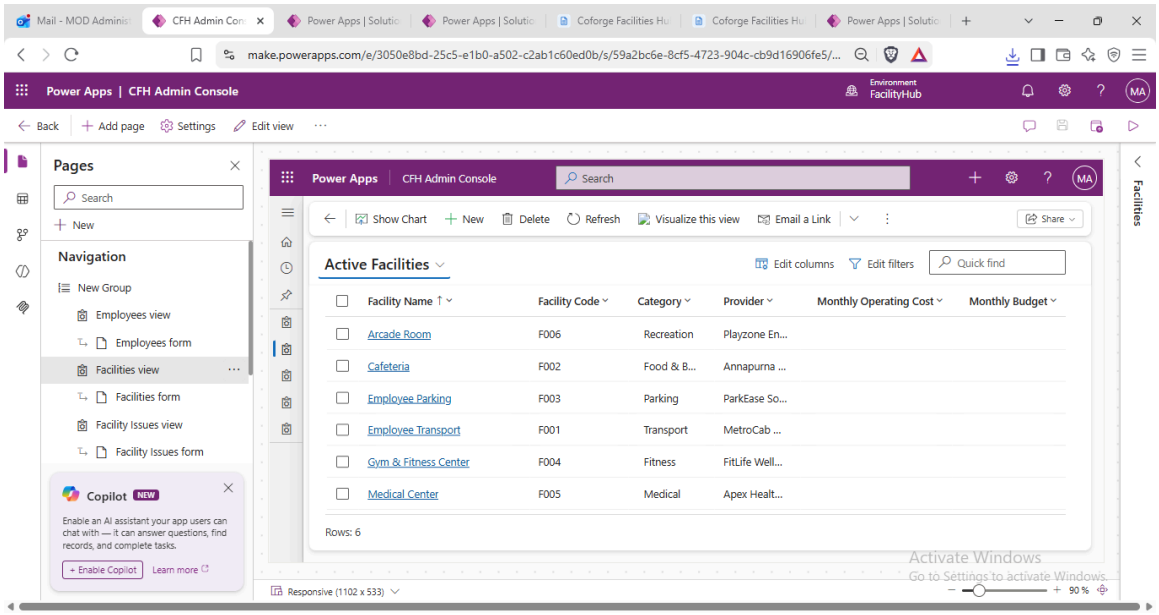

3. Model-driven app: CFH Admin Console

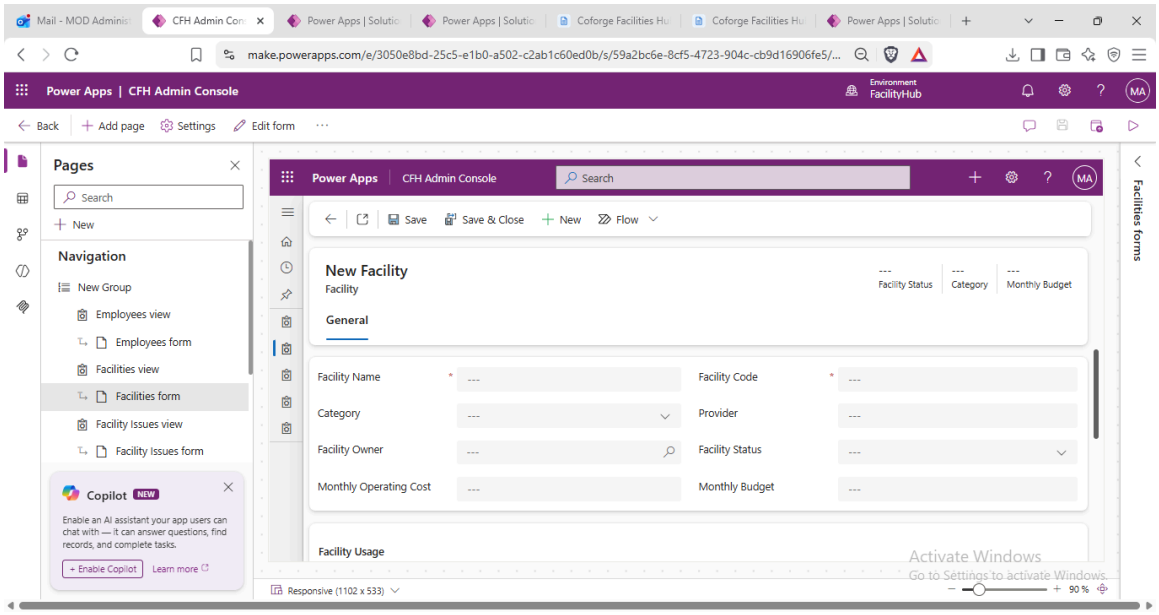

Administrators use the CFH Admin Console to maintain all five tables. It is built in the modern app designer with one view page and one form page per table, a main form that shows the relevant columns, and a dashboard.

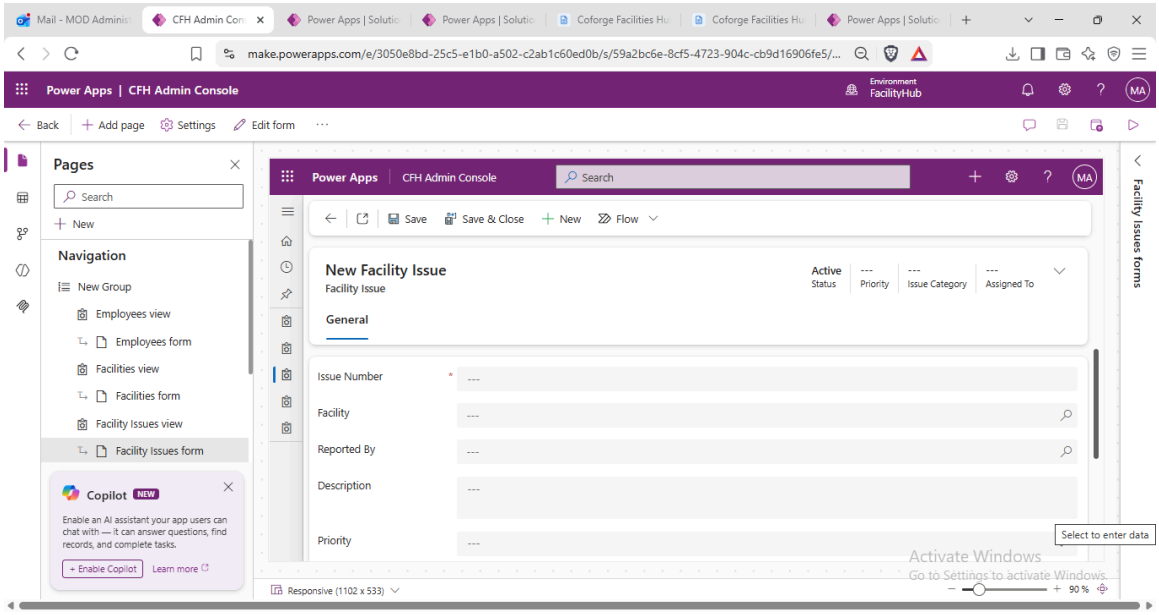

Views. Active Employees, Active Facilities, Active Facility Issues, Critical Open Issues, Unassigned Issues, Active Facility Requests and Pending Approval, alongside the standard system views.

Dashboard. CFH Admin Dashboard shows a "Uses by Facility" chart (sum of usage frequency per facility) next to a Facility Requests list.

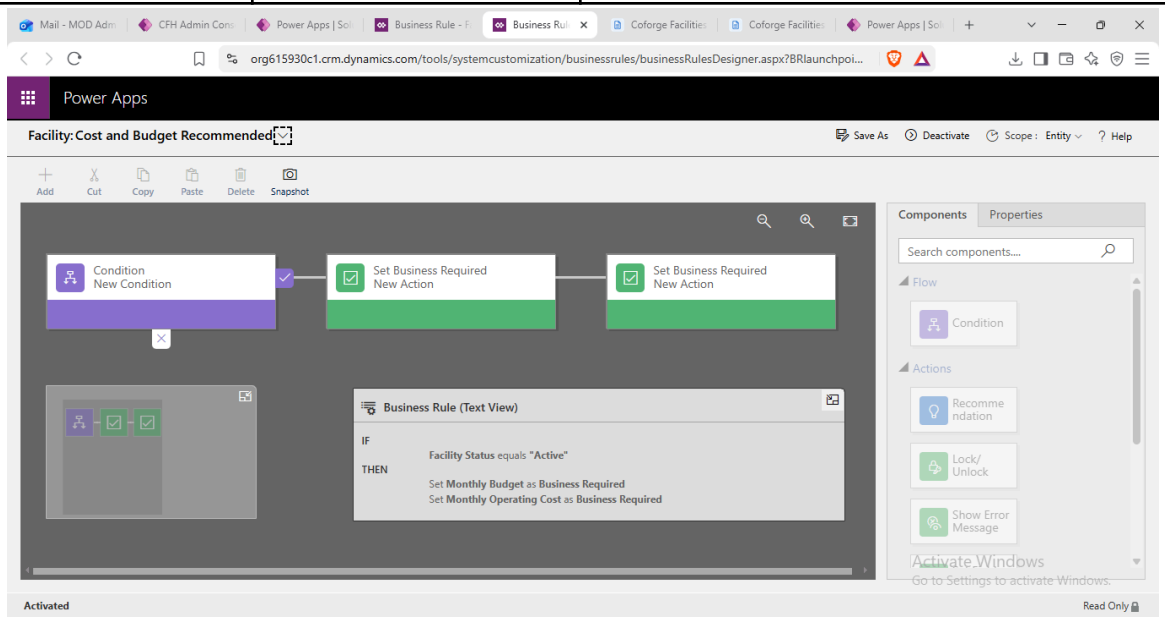

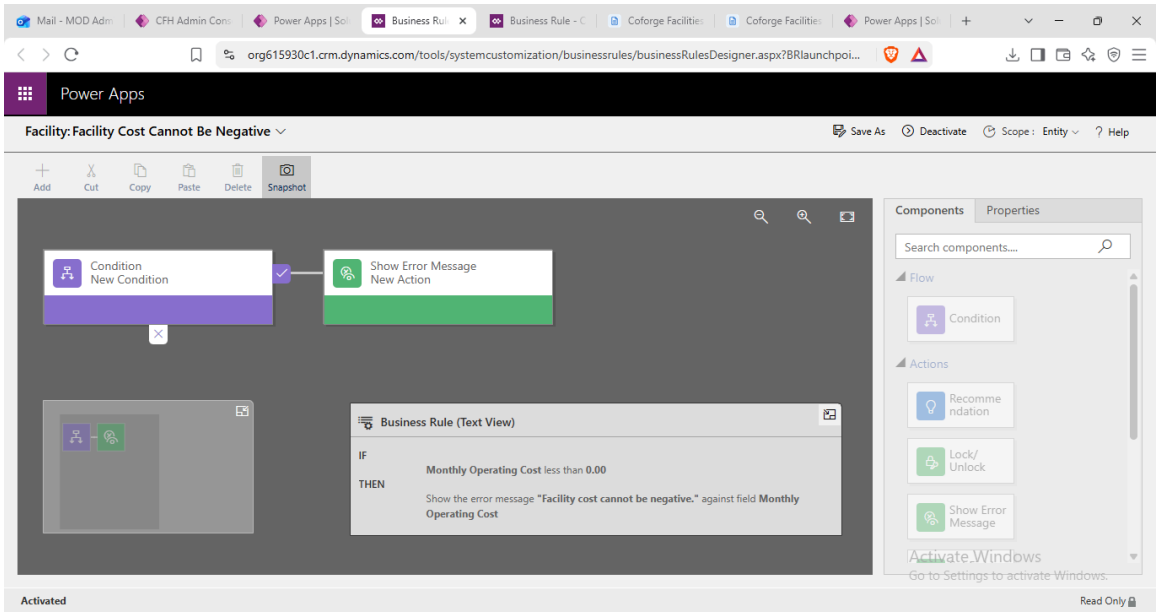

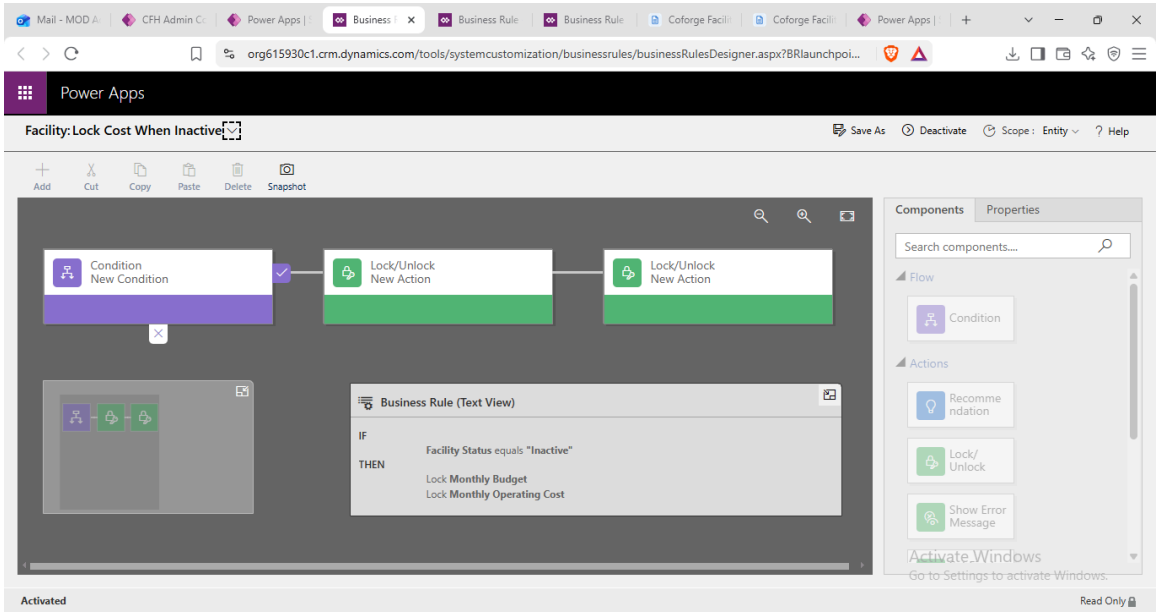

Business rules

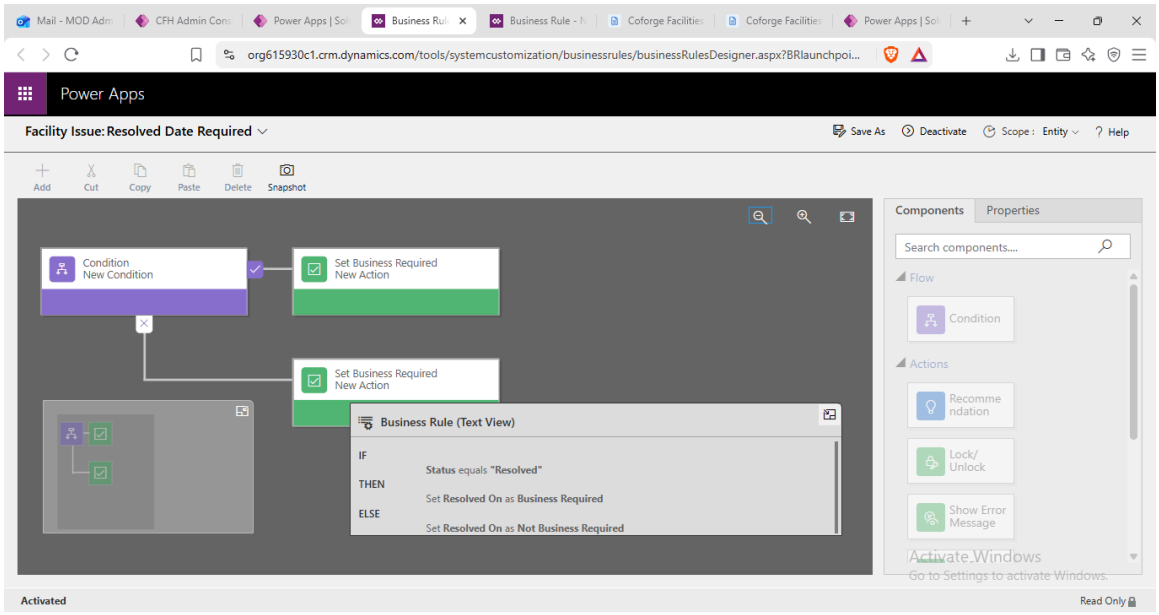

Table	Rule	Behaviour
Facility	Cost and Budget Recommended	If Facility Status is Active, Monthly Budget and Monthly Operating Cost become business required
Facility	Facility Cost Cannot Be Negative	If Monthly Operating Cost is below 0, show the error "Facility cost cannot be negative"

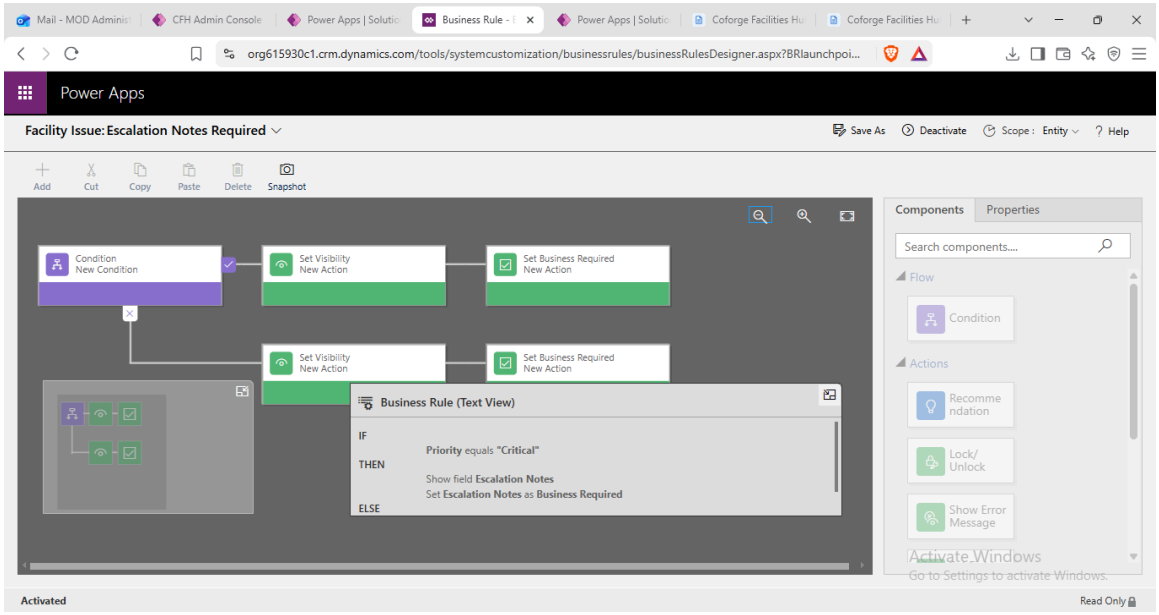

Table	Rule	Behaviour
Facility	Lock Cost When Inactive	If Facility Status is Inactive, lock Monthly Budget and Monthly Operating Cost
Facility Issue	Escalation Notes Required	If Priority is Critical, show Escalation Notes and make it required
Facility Issue	Resolved Date Required	If Status is Resolved, Resolved On is required; otherwise it is optional
Facility Request	Rejection Reason	If Status Reason is Rejected, show Rejection Reason and make it required

Business process flow: Request Lifecycle

The flow runs on Facility Request through four stages: **Submit** (Employee, Facility, Request Type) ⟶ **Manager Review** (Approver) ⟶ **Decision** (Reason) ⟶ **Fulfilment** (Fulfilled On).

4. Canvas app: Facility Hub

Employees use Facility Hub on a phone (640 × 1136) to see their own usage, request facility access and report issues. The app reads and writes Dataverse directly through the native connector.

Identity. At start the app matches the signed-in user to an Employee row by `Email = User().Email` and stores it in `varMe`. If no match is found, statistics show "—" and submissions are blocked with an error message.

Screen	What it does
Splash	Company Facility Hub welcome page

Screen	What it does
scrHome	Greeting and four personal statistics (My Usage, Total Requests, Usage Cost in ₹, Total Issues); buttons for Explore Facilities, Request Access (facility pop-up) and Raise Issue; tables refresh each time the screen is shown
scrProfile	Read-only form of the user's Employee record
scrFacility	Gallery of facilities with category; selecting one opens its details
scrFacilityDetails	Read-only name, status, category and provider, with a Request Access button
scrRequestAccess	Form on Facility Requests: Facility, Request Type, Start Date, Reason. Employee and Status (Submitted) are set automatically
scrIssue	Form on Facility Issues: Facility, Issue Category, Description. Reported By and Status (Reported) are set automatically

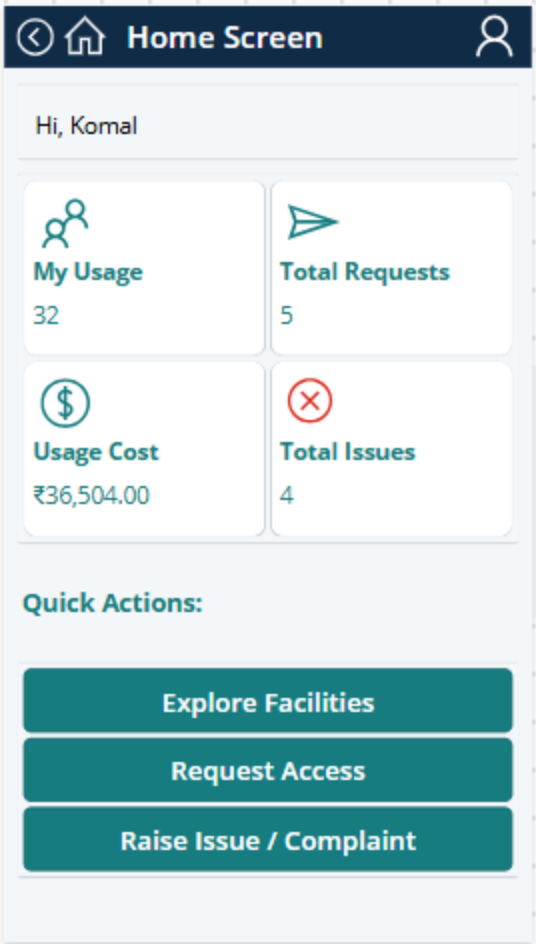

All screens share one reusable header component, `cmpHeader`, with back, home and profile icons and a title. A successful submit shows a confirmation message and returns to the home screen; a failure shows the error.

5. Cloud flows

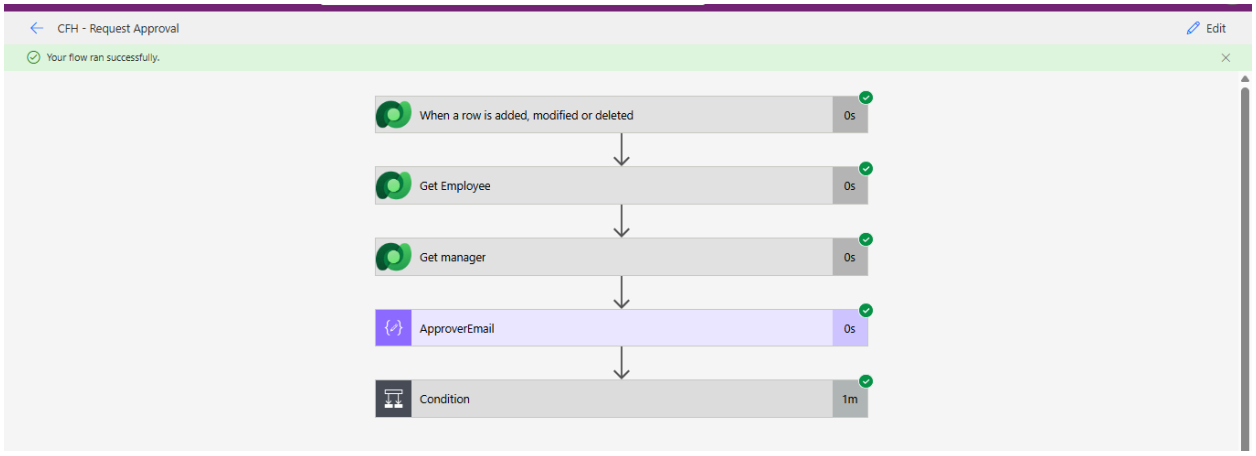

Three Power Automate flows run on Dataverse and Outlook, and are included in the solution.

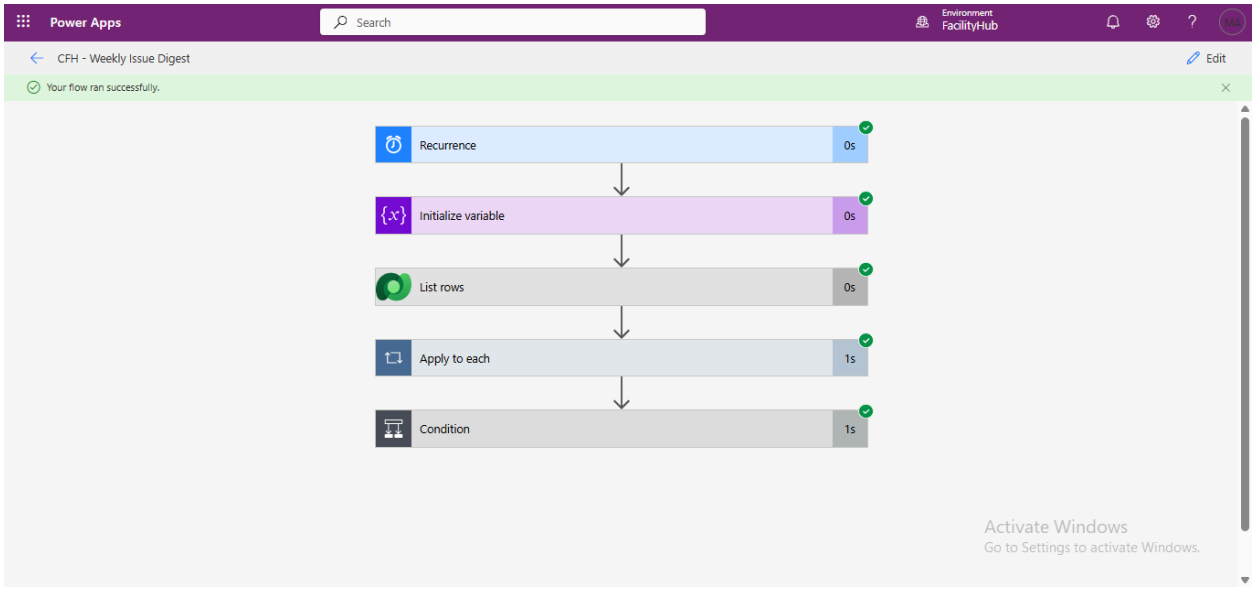

Flow	Trigger	What it does
CFH - Request Approval	A row is added to Facility Request	Looks up the employee and their manager. If the Start Date is already past, the request is set to Rejected with the reason "Start date has passed." Otherwise it sends an approval to the manager and waits. Approved sets the status to Approved; rejected sets it to Rejected, stores the approver's comments as Rejection Reason, and e-mails the outcome
CFH - Weekly Issue Digest	Scheduled: weekly, Saturday	Lists up to 50 active Facility Issues (newest first) with their facility and e-mails the table to the administrator, only when at least one exists

Flow	Trigger	What it does
CFH - Send Usage Summary	Scheduled: monthly, on the 1st	For each employee, retrieves the previous month's usage rows, builds a table of facility, usage frequency and total cost, and e-mails it. It was originally started from the canvas app and is now fully scheduled

The administrator address comes from the `cfh_AdminEmail` environment variable. Sample outputs from test runs are below.

6. Solution, limitations and conclusion

Everything is packaged in the unmanaged solution **Company Facilities Hub**: 6 tables, 10 choices, the CFH Admin Console app, the Facility Hub canvas app, 3 cloud flows, the dashboard, 1 environment variable and the Request Lifecycle process.

Conclusion. The solution gives employees a phone app for usage, access requests and issues, gives administrators a console with validation rules and a request lifecycle, and automates approvals and e-mail summaries on one Dataverse model.
